June, 2019 - Nov, 2022

PROJECTS

Inventory Control System

- An efficient solution that automates owner registration, supplier onboarding, product tracking, and order processing with real-time email notifications.

Library Management System

- A comprehensive platform built with Spring Boot for managing books, user transactions, reservations, and fines with secure JWT-based access.

Kurakani Chat Application

- A real-time chat platform with OTP-based registration, JWT-secured login, and WebSocket-powered messaging functionality.

BlogEcho Application

- A backend platform for blog and user management with secure JWT authentication and PostgreSQL integration.

Room Radar

- A web-based platform designed to bridge the gap between landlords and individuals searching for rental properties.

ATM Application

- A simulated system that handles account creation, authentication, and transaction tracking for basic banking operations.
